# PBS GROUP Unveils Its Most Powerful Engine Yet at Farnborough Airshow

**PBS Group, a company specializing in the research, development, and manufacturing of turbine propulsion units and aerospace systems, opens its booth today at the Farnborough International Airshow with the presence of Minister of Industry and Trade Jozef Síkela. This exhibition, focused on the aerospace and defense industry, is one of the most prestigious events of its kind worldwide.**

PBS Group will showcase its latest jet engine, the AI-PBS-350, as well as other cutting-edge products from its portfolio.

Developed in collaboration with the Ukrainian company Ivchenko-Progress SE, the AI-PBS-350 is the most powerful engine the company has produced so far. This compact engine is optimized for use in unmanned aerial vehicles and defense applications.

*“We are one of only two engine manufacturers in Europe capable of producing such an engine. With its high thrust, the engine offers excellent fuel efficiency and is also equipped with pyrotechnic ignition,”* stated Pavel Čechal, Vice President of Operations of PBS Group.

In addition to the AI-PBS-350, PBS Group will present other innovations at the exhibition, including turbine engines for UAVs and UCAVs, auxiliary power units (APUs), and environmental control systems (ECS) for helicopters and small aircraft.

Visitors can look forward to detailed demonstrations and information about the company’s advanced development and manufacturing capabilities.
